

Product Case Study

Case Study: Insulated Fire Curtains at Wm Morrison, Bideford.

Client: ISP Pearce
Architects: SDA Architects
Main Contractor: ISP Pearce

Project details: An existing store was to be extended as part of a number of Wm Morrisons store extensions to afford them more area of valuable retail space.

Client requirements: As a existing store extension a row of insulated fire shutters was required to segment the extension area in the event of a fire. The solution was to fit with the old store plan and fire strategy. It had to allow safe escape for staff and customers as well as satisfying the local fire officer.

Door Solutions: Due to reduced head room the normal solution of insulated fire shutters was not feasible on this development. Working closely with the architects and developers Armourpost then designed, supplied and installed insulated fire curtains that had a smaller coil up then the shutters to maintain the design intent of the store.
