

Product Case Study

Case Study: Insulated fire shutters at Wm Morrisons, Penrith.

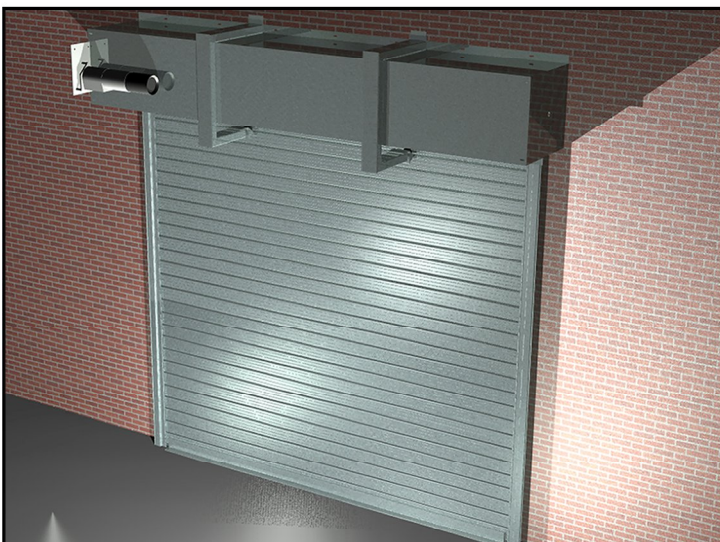

Client: RN Wooler
Architects: Davis Weatherhill Partnership
Main Contractor: RN Wooler

Project details: After suffering extensive fire damage in December 2009, a 'bigger and better' Morrisons was opened on 27th September 2010. With 22 aisles and an extra 2,000 sqft of floor space, it has been built using only the steel frame and three rear walls of the old store, meaning it has a completely fresh, new look.

Client requirements: Obviously with fire safety now at the fore, a product was required to allow the additional 2,000 sqft to fit with the old store plan and fire strategy. It had to allow safe escape for staff and customers as well as satisfying the local fire officer.

Door Solutions: Armourpost supplied and installed a large continuous run of our Fire Pro Insulath, an insulated fire shutter. This product has a number of key benefits that have been utilised in many Wm Morrisons stores extensions throughout the country. Whether it's a store extension or a one off requirement for protection from fire as well as radiant heat, the Fire Pro Insulath can be both a highly cost effective and an ideal fire safety solution.
