Clearview Roller Shutter Specification

The Clearview is a highly versatile and durable security product suitable for medium security commercial sites where see-through vision is a priority. The polycarbonate offers high visibility and can be used internally behind glass for shop displays, or as a stand-alone security barrier. Each Clearview shutter is manufactured using interlocking high impact polycarbonate moulded lenses combined with security aluminium tubing.

The shutters are supplied as standard with a manual override facility and a key switch control.

The shutters are available with single or three phase motors. The motor choice is normally made on the frequency of use of the shutter.

A single phase tube motor can be fitted within the shutter barrel and this is the most commonly used motor. For a single phase shutter a 13amp 240V fused spur (by others) is required within 1 meter of the motor at motor height.

Optional Extras:

Battery Backup Facility

Key Fob Remote Control

Safety Edge Sensor to Bottom Rail

Group Controls For Several Shutters

Wide range of colour options
